

Complete your HDTV experience with Bose® home theatre sound.

Easily.

The Bose CineMate GS II speaker system is the easiest way to bring out the full audio potential of your HDTV.

Proprietary TrueSpace® technology enables two Gemstone speakers and an Acoustimass® compelling sound for movies, games, sports and more.

The system easily connects directly to your TV, avoiding the need to disconnect other sources. And with no rear speakers, there's no wiring to the back of your room. A programmable universal remote control simplifies operation of other connected sources.

Looking for a home theatre upgrade to complement your HDTV?

The CineMate GS II system delivers with sound and style. Two powerful Gemstone speakers flank your TV and put you in the middle of dramatic home theater sound. You'll experience a level of realism that simply cannot be matched by TV speakers alone.

A hideaway Acoustimass module provides the low frequency effects that make movies and games so compelling. It even includes dedicated bass control. Place the module in a corner or out of view—all the sound seems to come from the compact speakers. Together, the speakers and Acoustimass module provide full depth and clarity for your music, too.

Simplified setup

Setting up a CineMate GS II system is a quick exercise, with only a few wires to connect. It hooks up directly to your TV with minimal—if any—disruption to existing component connections. A small interface module houses your audio input from the TV and displays on/off status for your system. And it's all controlled with a programmable universal remote that works seamlessly with most video components attached to your television.

Key Features

Proprietary TrueSpace® digital processing circuitry delivers a spacious, multichannel sound experience with strong center imaging from just two visible speakers and a hideaway Acoustimass module.

Gemstone® speaker array design, combined with our TrueSpace digital processing circuitry, delivers the depth and performance of home theater sound.

Acoustimass module works in concert with the small speakers to deliver a fuller range of theater sound and effects. The patented Bose design produces low frequencies for all channels with no audible distortion.

Interface module houses two LED indicators and connectors for audio input, and receives IR commands for the speaker system. Connects directly to your TV while providing status information (on/off) for your speaker system.

Universal infrared remote delivers seamless system operation and controls most video components attached to your TV.

System setup consists of only four simple connections. **Digital 5.1 decoding** provides improved realism from 5.1-encoded DVDs, DBS or HDTV.

Proprietary Videostage® 5 decoding and post-processing circuitry, combined with digital 5.1 decoding, delivers a high quality, multichannel surround sound experience from practically any source: DVDs, videocassettes, stereo CDs, even older mono TV shows and movies

Digital Dynamic Range® speaker compression circuitry enables you to hear soft sounds (particularly dialogue) even at low volumes—and still appreciate the impact of loud special effects.
