

Quieter than ever before.

The Bose® QuietComfort™ 15

Acoustic Noise Cancelling® Headphones.

The headphones that pioneered an industry are now even better.

New QuietComfort™ 15 headphones feature exclusive Bose® advancements in noise reduction technology. You hear less noise than ever before, and even more of your music and movies.

With the quality sound you expect from Bose. And a lightweight fit that stays comfortable for hours. It's a combination of benefits unmatched in the industry.

Quieter than ever before

We were the first to introduce noise cancelling headphones over 20 years ago, for use specifically on airplanes. And we've continuously improved the technology since then.

New QC™15 headphones significantly reduce even more noise across the full spectrum of human hearing. Advanced electronics now use microphones both inside and outside each earcup to sense and reduce more of the sounds around you.

QC15 headphones also feature improvements to our proprietary ear cushion technology, further reducing unwanted noise. New cushion materials now block more noise before it enters the earcups, delivering an even quieter listening experience and a comfortable fit.

Concert hall sound—or peaceful sanctuary

QC15 headphones also feature proprietary signal processing and audio reproduction technology for quality sound—including deep low notes—from small, lightweight earcups. You enjoy well-balanced and detailed audio, all made clearer by advanced noise reduction.

Even when not listening to music, you can use these headphones to quickly leave the noise behind—and relax.

For travel, work and home

When you fly with QC15 headphones, engine roar fades even further away. When you listen at home or at work, fewer distractions get in the way.

Key Features

Significantly improved noise reduction across a wider range of frequencies. Proprietary Bose innovations now use microphones both inside and outside each earcup to sense and reduce more of the sounds around you.

Redesigned ear cushions use new materials in a proprietary design to establish a critical acoustical seal—helping to further reduce noise while providing a comfortable fit.

TriPort® acoustic headphone structure, another Bose exclusive, features tiny vents in the earcups to enable a tonally-balanced audio performance—including reproduction of deep, low notes—from relatively small and lightweight headphones.

Active equalization electronically tunes the headphones' frequency response, enabling outstanding audio performance.

Single, detachable audio cable offers greater convenience than standard Y-cables.

Inline microphone allows for hands-free iPhone conversation and access to certain voice applications, such as VoiceOver and Voice Control, in other Apple products.

Inline three-button remote switches between calls and music, and controls volume, track selection and voice applications on select Apple products.

Fold-flat earcups rotate 90 degrees for easy storage and portability in the included case.
