

*The best reason yet to listen to music on your phone.*

*Presenting the Bose® Mobile In-Ear Headset*

Now it's easier than ever to enjoy Bose sound with your mobile phone calls and music. The Bose Mobile In-Ear Headset lets you take calls and switch back to your music with one-touch ease. And its quality audio may be the best reason yet to listen to music on your phone.

#### **Your music. Bose sound.**

Hear the music on your phone with more range and realism. Like all Bose headphones, the mobile in-ear headset features proprietary audio reproduction technology that delivers impressive low frequencies from small headphones—without artificial bass boost. You enjoy tonally balanced and clear sound for all your mobile music.

#### **One-touch switching. Hands-free talking.**

When your phone rings, just push the answer/end button to pause your music and take the call. The omnidirectional mic picks up your voice clearly—no need to hold it to your lips. End the call with one more touch, and your music continues from where you left off.

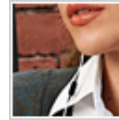

#### **Comfortable for hours on end**

Unlike conventional earbuds, this headset features silicone-tipped headphones designed to rest easily in the outer bowl of the ear, not the pressure-sensitive ear canal. Three sizes of contoured tips are also included so you can tailor a fit that's right for you. Take calls and listen to your music comfortably for hours.

#### **Works with most popular phones**

The Bose mobile in-ear headset is compatible with a wide variety of today's mobile phones. It's time to experience the difference Bose technology can make for your mobile audio.

#### **Key Features**

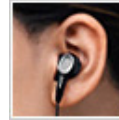

**Omnidirectional, inline microphone** for easy mobile phone communications. You don't have to hold the mic to be heard clearly.

**Answer/end button** on the back of the microphone lets you take calls with one-touch ease—and switch back to your music just as quickly.

**TriPort™ acoustic headphone structure**, available only from Bose, reproduces tonally balanced audio with deep low notes from small, in-ear headphones.

**Comfortable in-ear headphone design** with contoured, soft silicone tips that rest snugly in the outer bowl of the ear, not the canal.

**Small, medium and large silicone tips** for an adjustable, personal fit.

**Angled 3.5 mm plug** fits directly into mobile phones with recessed jacks, including Apple® iPhone™.

**Three 2.5 mm adapters** for compatibility with a wide range of mobile phones.

**Stability-enhancing lanyard and clothing clip** help keep headphones in place when you're on the move.

**Protective carrying case** for storing headset, adapters and a mobile phone.
