The Companion® 2 Series II multimedia speaker system represents a significant upgrade in sound and style over original equipment computer

speakers. Enjoy sharp, expansive sound for music, movies and games. These sleek and compact speakers fit easily in their surroundings to save useful desk space.

### Enjoy your computer more with Bose sound

Odds are, your computer is a primary source of entertainment. So why rely on standard computer speakers with so much rich content at your fingertips? Step up to Companion 2 speakers and unleash your computer's true potential with powerful, full-range sound for CDs, DVDs, MP3s, streaming videos, games and more.

Companion 2 speakers deliver both the subtleties in your music and the rousing resonance of movie and game sound effects. Think of them as giving new voice to your computer. And with Bose TrueSpace® stereo signal processing, that voice really has some reach. Experience a spacious, dramatic soundstage that seems to extend beyond the desktop speakers—whether you've set them next to your monitor or placed them farther apart. You'll also appreciate the clear, robust response for those challenging low musical notes and sound effects.

### It's all within reach

Companion 2 speakers bring more than new flair to your desktop. They're also designed for convenience, with both the volume control and headphone jack close at hand. All so controlling your listening experience is as simple as you'd like it to be.

Dual inputs enable the speakers to be used with your computer as well as a second audio source, such as a portable MP3 or CD player. And Companion 2 speakers are magnetically shielded to prevent interference with your monitor.

Now, it's time to play.

## Salient Features

### TrueSpace® Stereo Signal Processing Circuitry

This proprietary technology helps maximize audio performance by widening the image of closely placed speakers. You experience audio that seems to come from a soundstage wider than the two speakers, allowing for full performance beyond the computer screen.

### Ported cabinet design

Provides clearer, deeper low musical tones and movie/gaming special effects from a small enclosure.

### Dual inputs

Enjoy two audio sources simultaneously—one to your computer, the other to a portable audio device.

### Convenient control and jack placement

Thoughtful design provides convenient, easy access to volume, headphone jack and connection for a second source.

### Magnetically shielded speakers

Magnetic field is essentially confined inside the speakers and will not cause monitor interference or damage to magnetic media such as audio cassette tapes.

### Automatic tonal balance adjustment

Automatically adjusts tonal balance for rich, convincing audio performance at practically any listening level.
