

BOSE® L1™ MODEL II SYSTEM.

TONE. COVERAGE. PORTABILITY

L1® Model II Single Bass Package

Sound advantages—only from Bose: The new L1® Model II system is our best performing, most portable system for musicians, singers, DJs and public speakers. It delivers wide horizontal sound coverage and our smoothest tonal balance—across the stage and throughout the room.

Like the original, award-winning L1 system, this new model is an all-in-one innovation that replaces conventional monitors, mixers and PA speakers. It's packed with proprietary Bose® technologies designed to improve your amplified sound.

The system's breakthrough Cylindrical Radiator™ loudspeaker produces wide, uniform sound coverage—onstage and throughout an audience of up to several hundred—with little dropoff in volume and tone.

New with the Model II system: Articulated Array® speaker technology for greater tonal balance. The loudspeaker's 24 vertically mounted drivers are precisely angled to create clearer highs and more consistent tone in the room. Even people off to the sides enjoy well-balanced, detailed sound.

Deep bass from small enclosures: L1 Model II systems come with one B1 bass module to ensure more accurate amplification of lower notes for most voices and instruments—including guitars, keyboards and various horns. A double bass package is recommended for bass guitars, kick drums and DJs.

The B1 bass module is considerably lighter and smaller than conventional bass bins required for the same performance. Power up to two bass modules on a single power stand. Add two more bass modules to the system with an optional PackLite® extended bass package

Lighter and more compact: L1 Model II systems are our lightest, most compact live amplification systems—with four retractable legs on the power stand for easy setup and breakdown. The power stand also has a simplified control section; the single line-level input can be used with instruments, mics, mixers, laptops, MP3 players or DVD systems.

These lighter systems are built to handle the road. The loudspeaker has a rugged, reinforced grille, and each package includes padded carrying bags for major components.

Powerful option: ToneMatch® audio engine: Add the optional T1 ToneMatch™ audio engine to quickly expand the system and fine tune your sound with powerful, proprietary tone-shaping tools.

The compact, multichannel engine provides fingertip control of our largest library of ToneMatch presets. Just touch a button to make hundreds of precise refinements to the sound of instruments and microphones.

The engine also features a complete suite of studio-class reverbs, additional effects and dynamics processing. It connects to the L1 Model II system via a single digital cable for quick, streamlined setup.

Key Technologies:

- **Cylindrical Radiator® and Articulated Array® technologies:** The loudspeaker's 24 drivers are arranged using Articulated Array® technology in a slim, vertical enclosure—creating very wide horizontal coverage and consistent tonal balance.
- **Integrated power amplifiers:** Provide clean, precise amplification for L1® Model II system with up to two B1 bass modules.
- **Bass module out:** Delivers amplified bass output signal to one or two B1 bass modules. L1 system automatically adjusts equalization appropriately when bass modules are connected.
- **ToneMatch® port:** Digital audio and power connection for ToneMatch audio engine. Use with included ToneMatch cable.
- **Compact, lightweight enclosure:** Easy to transport, setup and breakdown. Small footprint takes up considerably less space than traditional bass cabs required for same performance.

Specifications:

L1 Model II Cylindrical Radiator® loudspeaker top: 43 1/2"H x 3 1/2"W x 4"D
16.3 lbs (7.4 kg)

L1 Model II Cylindrical Radiator® loudspeaker bottom: 43 1/2"H x 3 1/2"W x 4"D
17.4 lbs (7.9 kg)

L1® Model II power stand: 5"H x 10"W x 27"D
23.7 lbs (10.7 kg)

B1 Bass module: 15"H x 10 1/4"W x 17 3/4"D
25.1 lbs (11.4 kg)
