

If you thought home theatre was too complex,  
*here's something simple to think about*

**Technologies that set it apart:**

**Surround sound experience** Improvements to our signal processing, combined with new Gemstone™ speaker arrays,

lead to an enhanced home theatre experience from only two visible speakers and a hideaway Acoustimass™ module.

**Proprietary TrueSpace® digital processing**

circuitry delivers a spacious, multichannel sound experience with strong center imaging from just two visible speakers and a hideaway Acoustimass module.

**Bose™ Videostage™ 5 decoding circuitry** delivers a home theater experience from almost any source.

**Control integration** An advanced remote control accesses your 3.2.1 GS system, as well as your

television and video source (e.g., cable box or satellite receiver). You no longer need two or three remotes to control your home entertainment system.

Experience enhanced home theater sound from almost anything you watch—with greater simplicity than traditional five-speaker surround systems.

The 3.2.1 GS DVD home entertainment system delivers cinematic 5.1-channel sound with just two Gemstone® speakers and a hideaway Acoustimass® module. The system includes an elegant media center featuring a progressive scan DVD/CD player with HDMI output and AM/FM tuner.

Bose® patented Gemstone speaker arrays with breakthrough TrueSpace® digital processing circuitry transform home entertainment into a dramatic sound experience. The hideaway Acoustimass module provides the cinematic depth and orchestral sweep that bring movies and music to life. Place it out of sight to enjoy enhanced home theater sound performance with fewer visible components.

An elegant media center houses an integrated progressive scan DVD/CD player, AM/FM tuner and HDMI output. And with video upscaling, you'll enjoy resolution up to 1080p. Setup is easier than traditional 5.1-channel home theater surround sound systems. Just connect three wires and plug the system in for basic operation.

The 3.2.1 GS system is also equipped with Videostage® 5 decoding circuitry to deliver home theater performance from almost any source. Even classic movies and TV programs recorded before surround sound will seem lively and room filling.
