

Enjoy Bose® home theatre sound with your HDTV. Easily.

The Bose® CineMate II speaker system provides high-quality home theatre sound to get more from your HDTV experience. Just two compact speakers and a hideaway Acoustimass® module deliver sweeping cinematic sound that puts you in the middle of your movies, games and sports. Proprietary TrueSpace® technology enables this immersive performance - without immersing you in equipment. There are no rear or center speakers, eliminating much of the wiring of traditional 5-speaker systems. Just connect the system right to your TV and control basic functions with a simple four-button remote.

The CineMate II system is an ideal choice for your first home theatre speakers or a Bose surround experience in smaller rooms. The simplified, two-speaker setup offers a hassle-free addition to your HDTV. And the improved acoustics provide exceptional value for home theatre performance.

Newly redesigned Articulated Array speakers - now with a striking, pure black finish - aesthetically match today's flat-panel TVs. The hideaway Acoustimass module reproduces resonant low notes that add drama to movies and games. And it now includes a dedicated bass control for your listening preferences. Place the module in a corner or out of view - all the sound seems to come from the compact speakers.

The CineMate II speaker system only requires a few connections. It hooks up directly to your TV with minimal - if any - disruption to existing component connections. A small interface module houses your audio input from the TV and displays on/off status for your system. And a sleek, four-button remote handles basic system functions. An optional universal IR remote is available for customers who would like to have a greater control through the system

Key Features

Proprietary TrueSpace® digital processing circuitry delivers a spacious, multichannel sound experience with strong center imaging from just two visible speakers and a hideaway Acoustimass module.

Acoustimass module works in concert with the small speakers to deliver a fuller range of theater sound and effects. The patented Bose design produces low frequencies for all channels with no audible distortion.

Interface module houses two LED indicators and connectors for audio input, and receives IR commands for the speaker system. Connects directly to your TV while providing status information (on/off) for your speaker system.

Sleek four-button remote controls power, volume and mute functions in a simplified, streamlined design.

System setup consists of only four simple connections. Intuitive one-way connectors eliminate the guesswork often associated with more complex systems.

Digital 5.1 decoding provides improved realism from 5.1-encoded DVDs, DBS or HDTV.

Proprietary Videostage® 5 decoding and post-processing circuitry, combined with digital 5.1 decoding, delivers a high quality, multichannel surround sound experience from practically any source: DVDs, videocassettes, stereo CDs, even older mono TV shows and movies.

Digital Dynamic Range® speaker compression circuitry enables you to hear soft sounds (particularly dialogue) even at low volumes—and still appreciate the impact of loud special effects.
